
Invesco Pan European High Income Fund

Monthly Report April 2024 (covering March)

This marketing communication is exclusively for use by Professional Clients, Financial Advisers and Qualified Clients/Sophisticated Investors. This document may also be used by financial intermediaries in the United States. This is not for consumer use, please do not redistribute. Investors should read the legal documents prior to investing.

Summary of fund objective

The Fund is actively managed. The Fund aims to achieve a high level of income together with long-term capital growth. The Fund seeks to achieve its objective by investing primarily in European securities (debt and equity). At least 50% of the NAV will be invested in debt securities. The investment concerns the acquisition of units in a fund and not in a given underlying asset.

Investment Risks

For complete information on risks, refer to the legal documents.

The value of investments and any income will fluctuate (this may partly be the result of exchange-rate fluctuations) and investors may not get back the full amount invested. Debt instruments are exposed to credit risk which is the ability of the borrower to repay the interest and capital on the redemption date. Changes in interest rates will result in fluctuations in the value of the fund. The fund uses derivatives (complex instruments) for investment purposes, which may result in the fund being significantly leveraged and may result in large fluctuations in the value of the fund. Investments in debt instruments which are of lower credit quality may result in large fluctuations in the value of the fund. The fund may invest in distressed securities which carry a significant risk of capital loss. The fund may invest in contingent convertible bonds which may result in significant risk of capital loss based on certain trigger events. The Fund may invest in a dynamic way across assets/asset classes, which may result in periodic changes in the risk profile, underperformance and/or higher transaction costs.

Fund Performance

The Invesco Pan European High Income Fund returned 1.44% in March. This placed the fund in the third quartile of its peer group, the EAA EUR Cautious Allocation, which returned 1.33%. A positive month for both bond and equity markets with sentiment boosted by increased expectations that the European Central Bank, aided by slowing inflation in the region, could start cutting interest rates in June. Against this backdrop, duration had a positive impact on performance. Credit also contributed positively with subordinated financials leading the way. Drawing support from resilient economic data and upbeat earnings results, the fund's allocation to equities generated positive returns too. The three largest individual contributors were all equities - ING Groep, Intesa Sanpaolo and Daimler Truck. The biggest detractors were leisure company Codere (high yield bond), Teleperformance, a French digital business services firm (equity) and luxury goods owner Kering (equity).

Fund Positioning

The fund continues to be biased towards higher yielding parts of the bond market but avoiding companies that we think are likely to face significant challenges in dealing with higher borrowing costs and weaker economic activity. The largest allocation by industry within the bond portion remains financials. By industry the biggest non-financial exposures are to utilities, food and telecoms. The fund also has exposure to relatively defensive credits such as investment grade corporate bonds.

To broaden the opportunities for income and increase the opportunities for capital return, the fund holds an allocation of 19% in European equities. The focus here is on high-quality companies with strong balance sheets, healthy free cash flow generation and good management teams that are committed to and capable of returning that cash flow to shareholders where appropriate.

Outlook

The US federal funds rate is now in a target of 5.25% to 5.50%, its highest level in more than 20 years. In the eurozone, interest rates currently stand at a record-high of 4%. This highlights how far central banks have moved interest rates since the start of 2022. While the tightening effect has helped to calm inflation, it is important to shift focus towards the broader negative impact that higher borrowing costs have on economies. For us, this is particularly relevant to the weaker parts of the high yield bond market. While we continue to enjoy the higher income that today's yields offer, our more cautious outlook for the European economy and for high yield bond markets remains unchanged.
